

Rocky Mountain Stoneworks Ltd. has been installing and supplying durable and long lasting concrete fences since its inception in 1989. With hundreds of kilometers of concrete fencing successfully installed, we have the experience to tackle any size job, whether it's a 4' high residential fence or a 10' high sound barrier. With four styles of concrete fencing, (Wood Crete, Cobble Crete, Superior Crete & Wood-Concrete Hybrid Sound Barrier Wall) we have the fence that will suit your needs.

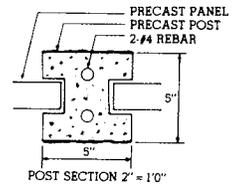

The fences simple design provides easy installation for contractors, landscapers and fence installers. The concrete posts are set into 12-inch diameter holes set five feet apart, posts are then anchored in a concrete footing. A bottom panel is then inserted down the post track and is supported by the concrete footing. Additional panels are stacked in one foot increments in an interlocking design.

We also offer a pure acrylic, water-repellent penetrating concrete stain available in a wide array of colours. The stain comes with a 10 year warranty providing excellent colour retention and uniformity, and will not peel or flake for the full warranty period.

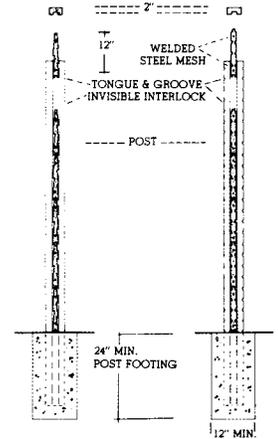

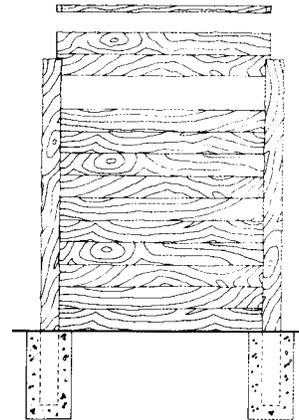

**Wood-Crete and Cobble-Crete offer significant benefits when compared to other fencing options:**

- Warm aesthetic appearance
- Privacy and sound reduction
- Versatile applications
- Maintenance free
- Cost effectiveness
- Consistent texture on both sides
- Interlocking panels
- Durable and long lasting
- Quick, easy, clean installation
- Functional in any climate
- Wide selection of colours to match existing or required colour palettes
